FME Feature Data Source in Autodesk's Geospatial Products

Safe Software (Canada) has developed FME Feature Data Source for Autodesk Map 3D, Autodesk MapGuide Enterprise, MapGuide Open Source, and Autodesk MapGuide Studio.

FME Feature Data Source gives Autodesk's geospatial product users a seamless connection to dozens of FME-supported formats using open source Feature Data Objects (FDO) technology. In addition, these users can access value-added versions of their data on-the-fly, leveraging the powerful data transformation capabilities of FME Workbench workspaces saved as custom formats.

"By directly accessing and transforming data with the FME Feature Data Source, Autodesk users now have a powerful new option for CAD/GIS integration that leverages proven technology and vastly extends the format reach of these products, said Dale Lutz, vice-president of Product Development for Safe Software."

FME Feature Data Source will be available in FME 2007.
