Free MARS Viewer by Merrick

MARS Viewer, a viewing application for Lidar and associated terrain data, will be released at the International LIDAR Mapping Forum (ILMF) 2006. This has been announced by Merrick & Company (CO, USA), the developer of this software. MARS Viewer allows users to view and navigate point cloud and surface models.

Merrick Advanced Remote Sensing (MARS) software is a stand-alone, Windows-based application specifically designed for processing, analysing and managing terrain data. It provides unparalleled application and visualisation performance for massive Lidar datasets and includes a modular tool suite that is used to manage field collection, data analysis, quality assurance, production, and client deliverable workflows.
