

GDS 2011 Spatial Data Management

Ridge-Soft has announced the immediate availability of GDS 2011. This solution introduces Multi Image Provider (MIP), a secure, highly compressed and lossless image format for transferring large-sized imagery over the network and for faster viewing.

GDS 2011 integrates with existing spatial data infrastructure and the built-in image catalogue facilitates users managing large inventory of satellite images and aerial photographs as an image library file management system.

GDS 2011 provides a superior deployment experience and improve process inefficiencies by simplifying imagery management and easing the distribution of large format images.

DES Consulting is the worldwide distributor for GDS 2011.
