

Geneq Launches New All-in-one GNSS and RTK Data Collector

Geneq has introduced a new all-in-one GPS, GNSS and RTK data collector series, the SXPro. Standard features of the series of handheld receivers include an extra-long battery life of more than 10 hours on a charge, as well as a large outdoor-viewable touchscreen. The handhelds are rated for IP65 for protection against water and dust. The SXPro handheld is also equipped with a 5-megapixel autofocus camera and Microsoft utilities.

The SXPro is sold as a fully loaded package that includes a spare battery, hard carrying case and FieldGenius Survey Data Collection Software. The series is built for mobile survey and GIS users for applications such as water, electric and gas utilities, transportation, mining, agriculture and forestry.

The SXPro RTK (real-time kinematic) model offers 220 multi-constellation channels for centimetre accuracy with RTK networks. A surveyor-grade external dual frequency antenna and cables are included. The SXPro GNSS offers 372 multi-constellation channels for sub-meter accuracy with SBAS corrections.
