

# Geneq Unveils NTRIP Client App for iOS

[Geneq](#) has introduced a new NTRIP client app for iOS that works with iSxBlue receivers. iSxBlue RTN is used alongside other geospatial information systems (GIS) and surveying apps to obtain real-time centimetre accuracy on an iPhone or iPad.

Key features include real-time kinematic (RTK) alarm configurations with NTRIP and DIP modes. The easy-to-use app allows users to update their receiver with the latest firmware, the company said.

Other features include real-time map location with accuracy and satellite skyplot for GPS, GLONASS and SBAS. The app supports all current and future constellations such as BeiDou and Galileo, the company said. iSxBlue and SxBlue GPS Receiver users include

GIS and surveying professionals in industries such as agriculture, environmental, government, mining, natural resources, surveying and utilities.
