

Geo Week 2024: 150+ supporters and partners already onboard

The organizers of Geo Week have announced an impressive list of more than 150 supporting partners that are backing the 2024 event. Geo Week is a leading conference and trade show focused on the increasing convergence of geospatial and built world technologies. For the upcoming edition, thousands of industry professionals will gather in Denver, USA, from 11 to 13 February 2024.

“Leading industry organizations from around the globe have pledged their support for Geo Week in record numbers this year, recognizing it as the premier event for increased integration between the built environment, advanced airborne and terrestrial technologies, and commercial 3D technologies,” said Lee Corkhill, group director at Diversified Communications, organizer of the event. “We’re thrilled that the most influential organizations in the global geospatial and built world industries choose Geo Week as a valued partner, and by working collectively we continue to advance the industry, gathering geospatial professionals together to learn how technologies can help us understand the world around us, create more efficient workflows, and aid in decision-making based on real-world data.”

More than 3,000 professionals are expected to gather for Geo Week 2024, as technology innovation continues to boom. The exhibit hall is expected to sell out with more than 200 solutions providers for the second year in a row and will display best-in-class solutions, allowing attendees to source the latest geospatial and built world innovations while networking with vendors and attendees.

Full event information, including workshops, conference programming, networking events, the [Geo Week Awards Celebration](#) and more will be available soon. Registration for the 2024 event will open in October.

About Geo Week

Geo Week, presented by Geo Weeks News, was created in response to the changing needs of built world and geospatial professionals, and to acknowledge the increasing convergence of technology. Geo Week’s conference programme and tradeshow floor feature commercial applications of 3D technologies, innovations and case studies in the built environment, advanced airborne and terrestrial remote sensing solutions, smart products for a full project team and much more. Event partners include ASPRS, ISPRS, MAPPS, USIBD and WGIC. For more information, [see here](#).

Geo Week will take place from 11 to 13 February 2024, and will gather thousands of professionals in Denver.
