

Geodesy and Software Training

Blue Marble Geographics is to organise the Applied Geodesy and Software Training on 27th October in Houston, TX. This public training is being offered in concert with their free second annual user conference the following day.

Blue Marble has a long track record of training surveyors and GIS users about the intricacies of geodetics, including coordinate systems, projections, datums, and other essential concepts, through applied hands-on software training. These daylong sessions are in-depth training courses of the fundamentals of geodesy based on Blue Marble's toolkit of powerful data conversion applications. This course is an introduction to geodesy and the Geographic Calculator for new users or an excellent refresher for those with more experience. The geodesy concepts covered in a lecture format are then applied in the software with real data, creating the perfect hands on review of the concepts essential to accurate mapping.

Geographic Calculator training will be on Wednesday 27th October at the Hilton Houston Westchase Hotel in Houston, Texas.
