

# Geomatica Software Upgrade

PCI Geomatics has made available an upgrade to its remote sensing and image processing software Geomatica. Version 10.3.1 is the latest release available which includes imaging tools for GIS as well as additional satellite and aerial sensor support.

Satellites fully supported in this release include THEOS (Thailand Earth Observation System), GOSAT (Greenhouse Gases Observing Satellite), and WorldView-2. Also included is support for ADS40 and ADS80 Digital Aerial Camera systems from Leica Geosystems.

Further colour balancing techniques have been added to the OrthoEngine automatic mosaicking tool, and an improved mosaicking process flow has been added to the EASI environment.
