

GeoMax Releases New GNSS Receiver

GeoMax has introduced the Zenith25 Pro, which it says is built to last and designed with the future of GNSS in mind. The GNSS receiver supports GPS, GLONASS, Galileo, BeiDou and SBAS systems, providing superior position availability, especially in challenging measurement conditions.

With the capability to simultaneously track up to 60 satellites over 120 channels and a rough, tough IP68 dust and waterproof rating, the Zenith25 Pro is mainly aimed at professionals of the surveying and construction industries, and it is equipped with the most advanced GNSS technology.

The Zenith25 Pro is equipped with an internal radio, 3.75 G Penta band GSM, integrated USF, USB and Bluetooth and full support of GNSS. All this combined with Q-Lock technology.
