

Geospatial Data Webinar

East View Cartographic is organising a webinar in which we will provide participants with tools needed to fully utilise geospatial data available. The event is to take place on Thursday 6th August, 12.00 - 1.00PM (CDT).

The data offered ranges from: paper and digital topographic maps; geological maps; Digital Elevation Models (DEM's); commercial satellite imagery. These data sources enable professionals to solve problems from the very simple (a map for your personal or recreational use) to the very complex (a vector GIS dataset for your custom cartographic or analytical task).

During the seminar, EVC will also place the e-commerce site into the larger context of the company. This will include what is versus what is not offered through the site.
