GeoTango Introduces SAME

GeoTango International (Canada) introduced SAME (See Anywhere Map Everywhere), a network-centric system that allows performing 3D visualisation and interactive exploration of multiple data sources over a distributed network. The product uses satellite/aerial images and sensor networks to provide real-time or near-real-time monitoring, surveillance and mapping of areas and structures anywhere in the world. When zooming-in, the system displays images or maps that are more detailed. Hotspots like webcams and other information sensors are accessible directly via a displayed image or map.
