

GIM International Launches Second UAS Special

After a very successful first edition, GIM International now has published a second issue dedicated to UAS, bringing you details of the very latest developments in the sector. The magazine will be distributed at relevant shows such as Intergeo Eurasia, the ILA Berlin Air Show, AUVSI Unmanned Systems 2014, ICUAS'14 and more.

Editorial manager Wim van Wegen says with only new and exclusive articles on a great variety of subjects, and an extensive interview with Peter Cosyn, founder of Gatewing (now Trimble Unmanned), the UAS special is a 'must read' for everyone involved in geomatics.

The magazine contains - among other things - a product survey on systems and features, an article on UAS surveys carried out high in the Andes, and an item about an unmanned airborne system operating in tandem with ground-based mobile platforms.
