

GIS Capabilities Now Available with TopSURV

Topcon (CA, USA) now offers a GIS module for the latest version of TopSURV. Operators using Topcon's survey-grade RTK GPS systems for conventional land survey tasks can now use the same equipment for GIS data collection. The seamless interface and common database enable a smooth and easy transition between the two functions. The extra costs of maintaining a separate sub-metre antenna, rover, and field computer for GIS data collection tasks are eliminated.

TopSURV + GIS can also be used with mapping-grade systems like Topcon's Map-R, featuring the GMS-200 receiver and MG-A5 antenna.
