

# Global GIS Enterprise License Renewal

Newmont Mining Corporation recently renewed its global geographic information system (GIS) enterprise license agreement with ESRI. The global enterprise license agreement enables Newmont to deploy the full suite of ArcGIS products in an open, scalable, and standards-based GIS architecture that will integrate with and leverage existing Newmont information technology (IT) resources.

The ESRI global enterprise license allows Newmont unlimited access to ESRI GIS technology and support. Newmont uses ESRI technology to create distributed data repositories that replicate data from central servers. Employees ranging from GIS professionals to casual users access the company's data via an intranet portal.

Over the past three years, Newmont has also successfully converted its divergent GIS data to ESRI enterprise data management. It has also managed and shared that data on a global basis.

Newmont Mining Corporation is one of the largest gold producers in the world, with operations on four continents.
