

Global Release SuperGIS Server 3 Value Edition

SuperGeo Technologies is releasing SuperGIS Server 3 Value Edition to global market. Designed for creating, managing and distributing diverse GIS resources over the Internet to support desktop, mobile and web applications, SuperGIS Server 3 Value Edition assists enterprises in developing, managing, integrating, and publishing multiple GIS services in the centralised server framework.

With SuperGIS Server 3 Value Edition, a variety of spatial data, images, and GIS functions can be utilised to desktop, mobile, and web applications as GIS services through the Internet. Companies can create an optimal workflow, improving the productivity and efficiency of decision making.

Major features of SuperGIS Server 3 Value Edition can be listed as enhancing published service styles, supporting online editing, creating highly-efficient caching, and improving geodatabase performance. Additionally, this set of GIS server enables customising a wide range of webpage side applications.

SuperGIS Server 3 Value Edition supports the mobile software: SuperPad and desktop software: SuperGIS Desktop, both are developed by SuperGeo Technologies, as well as commonly-used web browsers (e.g. IE). In order to cover broader services, SuperGIS Server Client for ArcMap is provided, which allows users who use ArcMap to directly read map services published by SuperGIS Server.
