

# GPS Goggle

The Zeal Optics Transcend GPS Goggle enables skiers to monitor their speed and altitude, as well as the time and vertical speed, using the GPS Goggle. The various data are visible on a head-up display. The stats can be downloaded on your computer with a Google Map overlay to review performance. The rechargeable lithium-ion battery allows 7 hours run time.

The goggle is PC and Mac compatible and includes European and American adapters and the software allows Imperial and metric units.

The goggle itself is polarised and reduces 99% of the glare. The lens is in-molded and anti-fog treated. The frame has a wide-vision spectrum and the design is helmet-compatible. It is applicable for more sports than just skiing.
