

# Hi-Target Launches New GNSS RTK Receiver

Furthermore, thanks to the built-in Linux operating system and multiple pre-loaded smart applications such as tilt surveying, electronic bubble calibration, NFC and voice DIY, the V90 Plus GNSS system enables the surveyor work more conveniently.

With the V90 Plus, Hi-Target aims to provide the surveyor with an industry-leading GNSS solution with improved accuracy and stability. Especially the self-developed antenna, based on air dielectric technology, is designed for multipath mitigation. It is not only lighter than traditional RTK antennas, but also effectively avoids the instability of ceramic dielectric antennas. Every detail of the V90 Plus is optimised to improve the performance.
