

High-Resolution Aerials of Canada

MapMart has added ATLIS Geomatics 10cm-30cm aerial imagery. A growing number of Canadian cities from the ATLIS Geomatics data set are available online at MapMart as well as from the free MapMart On-Demand Toolbar.

Until recently, geospatial data users had few options in purchasing aerial imagery of Canada, but ATLIS has emerged as a premier provider of high-resolution Canadian data. Through ATLIS Mapmart is able to offer these data for the Canadian urban and rural areas in Manitoba, Saskatchewan and Alberta.

Canadian cities that will be coming online during Q2 are: Calgary, AB; Morden, MB; Winkler, MB and municipalities throughout Southern Manitoba.
