

High-resolution IRS satellite image mosaics Euro-Maps available for Italy

In co-production, GAF AG and its subsidiary, Euromap GmbH (Germany), have extended the availability of the successful IRS orthophoto mosaic "Euro-Maps" from Germany, Austria and Switzerland to Italy. Euro-Maps is suitable for spatial planning and analysis of the current situations for a wide range of tasks. Euro-Maps is regularly updated and is the only high-resolution satellite mosaic on the market offering such precise and current information with 5m ground resolution and blanket coverage for multiple countries. The required areas can be precisely defined and this prevents losses caused by scattering, which allows cost savings. Euro-Maps provides an up-to-date, accurate and economical planning spatial information base which can be continually updated and expanded. Euro-Maps offer access to detailed information about specific locations and their spatial relationships. This allows reliable decision making and rapid and efficient preparation of planning measures and cartographical tasks. Euromap has the only IRS receiving and processing station in Europe. Today, Euro-Maps can already be created and delivered for other countries or regions anywhere in Europe, on request. Euro-Maps of the Iberian peninsula as well as large parts of northern Africa are just under construction and will be published beginning 2007. Euro-Maps will be demonstrated during Intergeo 2006 in Munich at the booth of GAF AG in Hall C2, booth C2.2220.
