

# ILMF Programme Launched

Whilst most people who have signed up to the European LiDAR Linked-In group will only have an interest in Europe, the origin of the Lidar Mapping Forum is in the United States: the International Lidar Mapping Forum (ILMF). The organisers of the event, Intelligent Exhibitions, have just launched the conference program for this event which is scheduled from 23rd to 25th January 2012, in Denver, Colorado USA.

The ILMF offers a world-class technical conference reporting on latest technology advances and recent projects, highlighting actual experiences and lessons learned in aerial and bathymetric Lidar with a focus on mobile mapping. An international theme with speakers coming from Europe and Australia. It covers technical developments, GIS, data processing and industry issues. On Monday 23<sup>rd</sup> January 2012, in the morning there is an ASPRS Hot Topics Session scheduled which is open for all delegates and visitors.

There are more than fifty companies exhibiting and a whole host of workshops concentrating on the Basics to LiDAR.

When registering before 7<sup>th</sup> November 2011, an early bird rate will be available.
