

ImageStation PixelQue

Intergraph Corporation (AL, USA) has released ImageStation PixelQue, an application offering several finishing tools needed in orthophoto production for image inspection, quality control, image enhancement, and image editing. ImageStation PixelQue combines all the tools needed into a single package tailored for production, streamlining and driving productivity throughout the orthophoto finishing process.

ImageStation PixelQue includes many tools for which users have traditionally employed a range of applications, many of which were not designed specifically for orthophoto production. By delivering these tools within a single application, which is tightly integrated with ImageStation OrthoPro, users benefit from support of four band and 16-bit images and preservation of georeferencing embedded in the file header.
