INPHO Launches New MATCH-T 4.0

INPHO (Germany) has announced launching of a new version of its fully automatic DTM generation software, MATCH-T 4.0. The major changes and improvements compared to the previous versions are:

- processing workflow and GUI were completely revised
- one seamless DTM can automatically be generated for entire blocks or any sub-areas
- optimal parameter settings for different terrain types are predefined
- the significantly enhanced matching engine has been fine-tuned for fully utilising of 16 bit imagery
- MATCH-T 4.0 offers increased speed and higher accuracy than previous version
- a tool palette for efficient post processing of DTMâ€™s is now available, for DTM splitting and merging, cutting into user definable tiles and converting into a variety of formats, such as ASCII, TIN, TIFF, BIL, VRML and more.

Bundled with the DTMaster Stereo software MATCH-T 4.0 forms a DTM processing, editing and quality control station, called DTM Box.
