

INSPIRE-ready Geodata Management

M.O.S.S. has released INSPIRE.Insight, an INSPIRE-ready geodata management application providing an end-to-end solution specifically aimed at helping organisations meet their obligations to publish and share geospatial data in compliance with the INSPIRE framework.

INSPIRE.Insight is a multi-tiered consultancy and implementation programme that addresses the different aspects of INSPIRE-compliance and caters for different organisational sizes, requirements, roles, and budgets. The different service levels provide the building blocks required to achieve INSPIRE compliance. The approach and offering is very flexible. Depending on their needs, clients can select the specific service level they require, ranging from a free INSPIRE data model for ArcGIS and comprehensive consultancy to building a complete INSPIRE data infrastructure solution, including fully outsourcing to M.O.S.S.
