

Integrated Mission Planning Software

Leica Geosystems Geospatial Solutions has released its new mission planning software, Leica MissionPro. The software provides mission planning capability for all airborne sensors, including Lidar, line and frame sensors, and is fully integrated into existing Z/I Imaging and Leica Geosystems workflows.

In addition to the core planning functionality, Leica MissionPro includes a range of new features such as 3D virtual Globe View and tools for project management and evaluating missions.

Leica MissionPro supports integrated multi-sensor and Lidar planning in a 3D mission planning environment and exports flight plans for both Z/I Inflight and Leica FCMS. The new software also provides access to web map services and uses worldwide SRTM data.

Leica MissionPro replaces both Z/I Mission and Leica FPES software. A free upgrade is provided to all Leica FPES and Z/I Mission maintenance customers. First customer deliveries have already taken place. A global series of customer software training events are scheduled.
