

Intergraph Offers Geospatial Enterprise Integrator

Intergraph Corporation (AL, USA) has signed an agreement with ACE Enterprise Slovakia Ltd. to provide its SAP-certified integration software, Geospatial Enterprise Integrator, to Intergraph customers.

Geospatial Enterprise Integrator allows organisations to seamlessly integrate Enterprise Resource Planning (ERP) systems like SAP with geospatial solutions from Intergraph. The ACE solution simplifies the creation and maintenance of interfaces between enterprise systems, and it offers a drag and drop interface. As a result, users become self-sufficient in exploiting and reusing all of the data resources available across a company's heterogeneous data environment.

In particular, utilities organisations will benefit from the integration of ERP and geospatial solutions. A complete geospatial resource management system, organisations can leverage customer information, emergency and service dispatch, compliance and risk management, billing, work management, one-call, and network analysis systems enterprise-wide, all with Web-enabled data access, analysis, and decision support.
