

International Lidar Mapping Forum (ILMF)

More than 500 delegates are expected to attend the 8th International Lidar Mapping Forum (ILMF) that is being held in Denver, Colorado, USA from February 21 - 22 2008, organised by Intelligent Exhibitions and TMSI.

For the first time, the ASPRS have given their formal support for the event recognising that the Conference plays an important role by openly focussing on the technical and commercial issues facing the industry. The 2008 Conference will focus on the increasing capabilities of not only the data capture technologies but also the significant developments in rapid processing and visualization of LiDAR data.' The full Conference program can be downloaded at www.lidarmap.org/ilmf2008/.

A larger number of international companies confirmed their attendance. For the first time, ILMF will have exhibitors from Israel, Sweden, India and China which is in addition to the core group that have regularly supported the event from the USA, Canada and Germany. To view the full list of exhibiting companies visit www.lidarmap.org/exhibitorlist/.

The International Lidar Mapping Forum has introduced a workshop series that aims to provide novice operators, their managers and potential purchasers of equipment with an understanding of the basic principles, fundamental benefits and technologies associated with Lidar. Delegates attending these workshops will find out what Lidar is, how it works, what the applications are, the cost benefits and how it compares with other mapping technologies. To view the workshop series schedule visit www.lidarmap.org/workshops/.

Visitors who book before 15th December 2008 will benefit from the early bird discount.
