iSMART Xtra for GE-Smallworld Users.

eSpatial (Ireland) has announced the release of iSMART Xtra for GE Smallworld. Developed in collaboration with Realworld, a Smallworld & Oracle solutions partner, iSMART Xtra for Smallworld provides a standards-based, rapidly deployed environment, for scalable and secure multi-user web publishing and editing of Smallworld data across the enterprise, using Oracle Spatial. It enables enterprises to leverage their existing Smallworld infrastructure, and coexist within an Oracle Enterprise environment without losing important features of their applications.

iSMART Xtra for Smallworld is a technology solution suite that allows valuable information and data stored within the Smallworld GIS system to be fully integrated within the Enterprise, providing a single 360 degree data view and enterprise-wide access to data for enquiry and editing.

iSMART Xtra is fully integrated and compatible with Oracle's Enterprise Architecture.

Built entirely on J2EE, this solution intelligently consolidates all geospatial data from the Smallworld environment into Oracle Spatial, integrates with other business data in Oracle and distributes via the web to Intranet and Internet users.
