

iXBlue User Conference and Training Event

iXBlue is organising its first user conference and training event, to be held at the Sheraton Suites in Houston, USA, from 25 to 27 February, with iXBlue product training offered on 28 February. The conference will provide an overview of and update on iXBlue systems, solutions and field work with presentations and talks by renowned experts on FOG technology, acoustic positioning systems, and other key technologies.

The main themes for this event are fibre optic gyroscope technologies, subsea positioning for AUVs (out of straightness survey, metrology, navigation at the North Pole, dynamic positioning), ship navigation and surveys, and land & air mobile mapping surveys.

Customers attending will have unprecedented access to iXBlue experts and partners as well as other users. They will have the opportunity to learn and participate in discussions regarding new technologies in the field.

The conference will offer excellent opportunities to interact with experienced users of iXBlue systems and will showcase the wide range of iXBlue technology applications.
