

Ixsea Releases LANDINS and AIRINS

Ixsea (France) has released LANDINS, a land survey solution which provides position, heading, roll and pitch. It offers high-accuracy position and orientation data in real-time, even in tough environmental conditions.

Also released was AIRINS, designed by IXSEA to meet the needs of high-accuracy position and orientation for the new generation of airborne mapping sensors. AIRINS provides high-accuracy position and orientation data in real-time, even in tough conditions.
