

# Large Scale South African Mapping

East View Cartographic (EVC) (MN, USA) has been officially designated as a “Map Data Services Provider”™ for maps from South Africa’s Chief Directorate of Surveys and Mapping (CDSM). EVC is offering topographic maps, orthophoto maps, and aeronautical maps produced by CDSM. This collection is a tool for everything from planning and development to mapping routes for travel. Maps are available in paper and digital formats and EVC can configure and modify the data to suit customer needs.

The strength of the South African collection comes from the 1:50,000 topographic maps. These are the largest scale maps available providing full coverage of South Africa. They are compiled directly from aerial photographs and contain essential information such as elevation, place names, boundaries, and magnetic data. CDSM has also produced several complementary series including 1:250,000 topo-cadastral maps, 1:500,000 topo-administrative maps, and 1:500,000 aeronautical maps.
