

# Leica Geosystems and Geomap Support Digitizing Facility Management

Leica Geosystems and Geomap, a cloud and GIS-based integrated workplace management system (IWMS), have announced global cooperation to support customers in the digitalization of their facilities and asset support services. The integration of Geomap's IWMS platform with Leica Geosystems' reality capture solutions provides customers with the ability to extend the life of mission-critical assets, assess maintenance remotely, provide managers with accurate and reliable information and use geospatial information for indoor navigation and location-based services. Digitizing building portfolios in the Geomap IWMS software solution has significant benefits in terms of asset and maintenance tracking and cost savings.

## Managing buildings and maintenance activities in 3D

"The integration with [Leica Geosystems](#) technology offers a unique solution to manage buildings, related assets and maintenance activities in 3D," said Andrea Paglialunga, business development manager at [Geomap](#). "We are a long-term user of Leica Geosystems solutions, and we are excited to take the relationship a step further, where both companies will benefit from a user-friendly solution that gives the opportunity to connect digital twins in a cloud IWMS platform."

Leica Geosystems' solutions are part of the Hexagon Building Solutions portfolio, which delivers value to its customers in the building industry through an innovative portfolio of information, collaboration and visualization technologies. Leica Geosystems and Geomap ensure that customers can quickly and easily digitally capture the physical environment, allowing them to proactively manage current and future requirements.

"Building owners and operators rely on their service partners, digital solutions and services to help build strong and effective automated processes," said Fabio Ponzio, vice president of Hexagon Building Solutions. "Geomap and Leica Geosystems provide their customers in the field and the office with best-in-class reality capture and IWMS solutions and services. We are excited to announce our partnership and look forward to enabling our customers worldwide to leverage the power of digitalization in their daily environment."
