

Lidar Rectification Software

Optech has released the Optech LMS Lidar Mapping Suite for its Lynx Mobile Mapper clients. It offers Lynx clients a new workflow designed specifically for high-volume production processing, and incorporates a fully automated batch-mode capability.

Optech LMS enables simultaneous processing of multi-mission data collects, and includes multi-threaded and distributed processing capabilities to further increase processing efficiency.

According to Daina Morgan, Optech's Lynx Mobile Mapper product manager, Optech LMS Standard includes all the capabilities the clients are used to, with the added feature of comprehensive coordinate conversion. This facilitates a transition without the need of extensive retraining.
