

LizardTech Releases GeoExpress 5.0 SDK

LizardTech (WA, USA) has announced the release of GeoExpress 5.0 SDK. This latest release of the SDK offers unlimited encoding capabilities to both MrSID and JPEG 2000 and exposes functionality contained in the GeoExpress 5.0 standalone product including JPEG 2000 encoding, NPJE/EPJE profiles, support for WKT-based spatial reference system metadata, and area of interest encoding of imagery to MrSID Generation 3 (MG3) as well as JPEG 2000.

With direct access to both JPEG 2000 and MrSID unlimited encoding, users will realize a lower Total Cost of Ownership (TCO) for storage and delivery of massive imagery, as well as have the opportunity to create complimentary GIS imagery products by leveraging functionality previously limited to the GeoExpress standalone product.
