

# LP360/Classify Version 1.5.1

QCoherent Software (CO, USA) has released LP360 v1.5.1 and LP360 Classify v1.5.1. LP360 is a Lidar tool for integrating and processing Lidar point clouds in ArcGIS.

New features in LP360 v1.5.1 include:

- accelerated export and conflation performance
- additional exporting options including intensity raster
- Lidar QA/QC Toolbar
- enhanced profile functions
- intensity shading toggle

With LP360 v1.5.1 users can export contours directly from Lidar LAS files, integrate and create 3D breaklines from 2D features, classify Lidar point clouds using familiar geospatial operations, and conflate elevation statistics to features.
