

# 'GIM International' seeks contributions from industry professionals

The editors of '*GIM International*' are keen to hear about your interesting stories and exceptional projects. This is your chance to share your field-specific knowledge and professional experience in an article or column, so contact us with your suggestions and ideas!

*GIM International* welcomes informative contributions about real-life situations from industry professionals, aligning with the

editorial theme of the magazine. For extra inspiration, take a look at the themes of the next two editions:

## Issue 7 | Digital Twins (Intergeo Edition)

Aligning with the Intergeo event, this edition reflects on the practical challenges in the geospatial domain related to digital twins. Although the concept of the digital twin has gained significant momentum in recent years, there are still unresolved issues. Which unique knowledge, skills and expertise can the geospatial domain contribute to turn digital twin solutions into reality?

## Issue 8 | Cadastre & Land Administration

Geospatial data is obviously key to sustainable land management. But what are the common success factors for land administration and cadastral systems around the world? In this issue, we will focus on standards and solutions that make it easier to configure land administration workflows, including a selection of real-life examples.

If you are interested in contributing an article or have any suggestions for the editorial team, we encourage you to contact Wim van Wegen, Head of Content. You can reach him at [wim.van.wegen@geomares.nl](mailto:wim.van.wegen@geomares.nl).

Wim van Wegen serves as the Head of Content at both GIM International and Hydro International.
