

# Malaysian University Improves Research Skills with SuperSurv 3.1

Supergeo Technologies, the provider of complete GIS mapping software and solutions, has announced that SuperSurv 3.1 assisted the Faculty of Human Ecology at the University of Putra, Malaysia, in completing efficient field data collection to perform advance analysis and support its research projects.

University of Putra is the biggest public university in Serdang, Malaysia with 16 faculties such as Agriculture, Engineering, Computer Science and Information Technology. As a premier institution of learning, the university strives for excellence through improving the hardware and software equipment and encouraging constant educational innovations.

GIS nowadays is used as an important tool for topological analysis of geographical spaces, modeling, showing the time and ecology change. Featuring handy layer management, GPS support, and new editing functions, SuperSurv 3.1, the Android-powered mobile GIS application, allows educators and students to obtain reliable field data for GIS visualisation and analysis for greater research results.

Supergeo will exhibit at Asia Geospatial Forum 2013 in Kuala Lumpur, Malaysia, to increase its market share through collaborating with local enterprises, education institutions, and governments in ASEAN.
