

# Maps for MapServer â€™ Global Edition

DM Solutions Group Inc. (Canada) introduced a new addition to their line of data products, Maps for MapServer - Global Edition. This packages provide a cost effective means of instantly achieving superior cartography in MapServer applications.

The launch of Global Edition reflects the global distribution of MapServer users and the associated requirement for high quality maps. It follows the successful launch of U.S. Streets Edition and Canadian Streets CanMap Edition.

The new Global edition of Maps for MapServer now enables the same high quality mapping for views around the globe ranging from city, state, country or the entire world. Users may choose from a traditional political and highway map, a global terrain map with bathymetry or a hybrid map combining both.
