

MapSpeller for ArcGIS

Edgetech America, Inc. (USA) has released a novel, spatially-smart spell checker for ArcGIS Desktop users.

Before printing, MapSpeller quickly checks for, suggests corrections to, and corrects spelling errors in and around GIS maps using patent-pending processes.

The MapSpeller toolbar is delivered as an ArcGIS extension and is available for purchase in the USA. The introductory pricing has been set between \$80 and \$150, depending on quantity. Prospective buyers are invited to try out the software before purchasing with a free 30-day evaluation keycode. Future versions of MapSpeller are expected to include multi-lingual capabilities for international users.
