

MAPublisher v6.1 for Illustrator

Avenza Systems (Canada) announces the release of MAPublisher 6.1 for Adobe Illustrator, a software product for producing high-quality maps from GIS data. New functionality includes joining points based on attribute values, the ability to copy the coordinates of a known point location and the ability to rotate point symbols based on attribute data. It includes the very latest updates to the core FME library from Safe Software. The update is free to all current MAPublisher Maintenance Program subscribers and replaces the current shipping version of MAPublisher 6.03 for all new customers.
