

Merrick and Juniper Unmanned Announce Partnership

Merrick & Company's™ Geospatial Solutions (GSS) team has entered into a business partnership with Juniper Unmanned, a full-service provider of UAS solutions. The purpose of this new business relationship is to provide professional services and products to organisations that value growth chances in the rapidly emerging global UAS marketplace.

Roger Hanson, director of strategic programs of Merrick's GSS team, stated that Merrick is thrilled to partner with [Juniper Unmanned](#) as they offer a wide range of exceptional professional services for the rapidly emerging UAS market. The combined capabilities of the companies will provide end-to-end solutions for organisations that envision long-term value by participating in the UAS marketplace, both in the US and internationally.

As an established geospatial solutions provider, Merrick currently operates the RQ-84Z Areohawk from [Hawkeye UAV](#) out of its subsidiary, Merrick Mexico, in Guadalajara, Mexico. Merrick's UAS platform is used to support cadastral modernisation, infrastructure, agriculture, transportation, and energy clients in Mexico, Colombia, and Latin America. Merrick's international UAS consulting and operational experience, combined with established and successful geospatial processes and workflows, provides a valuable contribution to the partnership.

[Merrick & Company](#), a geospatial, engineering, architecture, and surveying firm, serves domestic and international clients by providing geospatial technologies, software products, and professional services to support the sustainable infrastructure, energy, life science, and national security markets. Merrick is an employee-owned company headquartered in Colorado, which maintains 19 offices in the US, Canada, Mexico, and the United Kingdom.
