

MicaSense Atlas Integrated with Pix4D Software

MicaSense Atlas is now integrated with Pix4D desktop software. This new partnership is designed to offer MicaSense customers the power of desktop processing, as well as the flexibility of MicaSense Atlas.

Customers value Atlas as an analytics and collaboration platform, said Gabriel Torres, CEO of MicaSense. They also indicate that processing data locally is important to them and their operations. Combining the processing capability of Pix4D's software with the power of the MicaSense Atlas analytics is a solution that optimally fulfills these needs.

With the new "Upload to Atlas" feature (available from 8 August, 2017), users can share the processed results with MicaSense Atlas directly from the Pix4D user interface.

Jorge Fernandez, solution manager for agriculture at Pix4D stated that Pix4D's agricultural focus has always been to provide the most radiometrically and geometrically accurate results possible. Pix4D is happy to open this up to MicaSense Atlas users. This new button simplifies everything for them, he added,

MicaSense will be distributing yearly and perpetual licenses of Pix4Dag and Pix4Dmapper Pro. For more details on how MicaSense Atlas users can incorporate Pix4D into their workflow, visit the [MicaSense website](https://www.micasense.com/).
