

# Mobile Cadastral GIS 3.0 for Android

SuperGeo Technologies has released Mobile Cadastral GIS 3.0 for Android worldwide. This solution integrates with GIS, GPS and e-compass technologies to assist field surveyors in quickly recognising their current location, as well as the correct cadastral information.

With Mobile Cadastral GIS 3.0 that considerably enhances the interface, map display function, and query speed, users can define the data source and cadastral information to meet their needs. Besides the cadastral query function, the records of waypoint and GPS track provide field surveyors with real-time information. Moreover, field surveyors can

check these data as the track reference and analyse them in a desktop computer.

Mobile Cadastral GIS 3.0 for Android is currently available in Taiwan.
