

# Mobile Mapping v11.1 for ArcGIS Online

Orbit GT will be showing its Mobile Mapping solution for ArcGIS Online at the Esri 3D Forum and the Esri UC, San Diego, taking place from 18-23 July 2015. This App provides seamless access to petabytes of mobile mapping content collected by a variety of service providers using diverse collection techniques, all available in the Marketplace.

The Mobile Mapping for ArcGIS Online App is Orbit GT's first product using full HTML5, making this app usable on mobile platforms as well as traditional desktop PCs. The first app to become available is a free demonstrator accessing a set of demo data provided by Orbit GT partners and customers.
