

MobileMapper Pro Package Introduced

Thales (France) has introduced MobileMapper Pro Package with sub- metre post-processing as a standard feature. Mobile workers will continue to secure 2-3 metre real-time accuracy in the field, but can now differentially correct data in the office to achieve 70cm accuracy on baselines up to 50 kilometres. As a complement to the MobileMapper Pro Package, MobileMapper Beacon is a differential correction receiver with Bluetooth wireless technology. MobileMapper Beacon gives users access to free, real-time DGPS corrections from beacon networks around the world. MobileMapper and MobileMapper Beacon are powered by 4 AA batteries and designed for maximum portability under rigorous conditions. MobileMapper Beacon provides RTCM SC-104 DGPS corrections via cabled connection or Bluetooth wireless technology.
