

# MrSID Generation 4 Decode SDK

MrSID Generation 4 Decode SDK (MG4 DSDK) compliments the release of LizardTech LiDAR Compressor. This SDK leverages the new and improved version of the MrSID format that enables users to view and access their LiDAR data much faster than traditional uncompressed formats would have allowed.

Trusted as a raster format by geospatial professionals since 1992 and supported in virtually all GIS applications, MrSID is the highest quality file format with the most advanced compression technology available. A free download of the MrSID Generation 4 Decode SDK is available and enables application developers to add support for viewing and decoding LiDAR datasets compressed to MrSID.
