

New Dimension of PPWK GeoInvent Solutions

PPWK GeoInvent (Poland) introduces a new product in spatial data collection and processing; MMS 3D (mobile Mapping System 3D Positioning). PPWK GeoInvent offers implementations of its technology on international markets as well as Europe-wide services of spatial data collection and processing. The new MMS 3D release introduces a new dimension and quality in the area of data collection and processing for:

- navigation databases building and updating
- infrastructure management
- analysis of security conditions including traffic security

as well as for other applications in urban management and planning.

MMS 3D technology allow fast and precise determination of object positions in three dimensions. The upgraded positioning system enables to get the third dimension (of height above s. l.). The precision of automated position collection has been increased from 1.5m to 1m.

MMS (Mobile Mapping System) is technology invented and implemented by PPWK GeoInvent.
