

New Firmware for the Aibot X6

Aibotix has released a new firmware version for the Aibot X6 hexacopter as well as a new version of the AiProFlight flight planning software. The newest firmware release includes several advancements, such as improvement of the flight stability and safety, which is especially important for a better performance in executing inspection tasks, and advancement of the pitch-and-roll compensation of the camera gimbal for smoother pictures and video output.

The new AiProFlight version 2.5 introduces a set of new and improved functionalities to lighten the users' daily work: A new wizard facilitates raster-generation and thus the planning of surveying flights, a redesigned, user-friendly wizard facilitates the linking of pictures with their geographical information. Furthermore, AiProFlight now supports

infrared triggering to control cameras that allow triggering by infrared remote control, such as the Sony Alpha 7.

For more information on the Aibot X6 see [here](#).
