

# New Release of ArcGIS Explorer

The latest release of ESRI's ArcGIS Explorer, a lightweight viewer that makes it easy to explore and share geographic information, contains many new features and enhancements.

The new version of ArcGIS Explorer extends the capabilities of the free software that brings the power of GIS to everyone. New capabilities include

- ability to access, modify, and save result properties
- improved hyperlink capabilities that make it easy to integrate web-based content and local files, videos, and documents
- improved result views that allow you to control the zoom and perspective for any result
- Improved management and organisation of results
- multilingual driving directions
