

# New Satellite Imagery Mapping Solution

DigitalGlobe (CO, USA) and DMTI Spatial Inc. (Canada) has announce the immediate availability of Satellite StreetView. Satellite StreetView is an imagery-mapping solution combining high-quality digital mapping data with the highest resolution satellite imagery commercially available on the market.

This new product combines 60-centimetre resolution QuickBird orthoimagery of entire urban areas with precisely-aligned vector map layers resulting in a real-world depiction of Canadian ground features. The integration of CanMap Streetfiles provides users with street centerline data and address lookup functionality, fully integrated with the imagery. Satellite StreetView is currently available for Toronto, Ottawa, Quebec City and Calgary. Montreal, Vancouver, Hamilton-Niagara, Halifax, Regina, Saskatoon, Windsor, Fredericton, and Saint John will be released over the next few months, with many more cities to follow. The imagery is updated annually and the mapping data is updated quarterly.
