

New UAV/UAS Category Added to Companies Directory

In response to the growing interest in Unmanned Aerial Vehicles/Unmanned Aerial Systems (UAV/UAS), this category has now been added to the Companies Directory, thus making them easier to find. Any companies manufacturing UAV/UAS or providing services using them are invited to add their details or to update their existing profiles.

Unmanned aerial survey makes use of light, autonomous or remotely controlled aerial vehicles providing geospatial reference and often an aerial camera. They take the shape of a 'flying wing', and are available in helicopter or multicopter designs.

GIM International has responded to the growing demand and usage of such devices in the wider survey community by adding them as separate categories under the 'Manufacturer',

'Contractor/Service Provider' and 'Trading – Supply Companies' main categories.

[Check your company entry](#), [add your company](#) or [instruct us to amend your listing](#) to include the new category!
